

PARAS ADHIKARI

Full Stack Developer | Java • Spring Boot • React.js • MongoDB | AI-Integrated Systems

Gurugram, Haryana | +91-9756278094 | adhikariparas60@gmail.com | Immediate Joiner - Open to Pan-India Relocation

PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience building production-grade, AI-integrated web platforms using Java, Spring Boot, React.js, and MongoDB. Skilled in architecting scalable, low-latency systems - from real-time bidirectional chat to automated calling and multi-tier subscription engines. Actively works with AI coding assistants and LLM APIs (Claude, OpenAI) to build intelligent, production-ready features. Proficient with industry-standard tools including VS Code, IntelliJ IDEA, and Postman. Delivered multiple end-to-end projects with measurable performance outcomes. Immediate joiner, open to full-time opportunities across Pan-India.

KEY ACHIEVEMENTS

- Reduced API response times to under 15ms through MongoDB query and indexing optimization.
- Built AICX, an AI-driven support platform with real-time chat and automated calling, from concept to deployment.
- Achieved a 40% increase in user engagement on the Code Combat platform through real-time multiplayer features.
- Delivered multiple full-stack projects end-to-end, covering backend architecture, frontend development, and database design.
- Integrated AI/LLM APIs into production systems to power intelligent, real-time features across projects.

CORE SKILLS & TOOLS

Languages: Java, JavaScript, Python, C, SQL

Backend & APIs: Spring Boot, Spring Security, RESTful APIs, Node.js, Express.js

Frontend: React.js, Tailwind CSS v4, HTML5/CSS3, Responsive Design

Databases & Tools: MongoDB, MySQL, Postman, VS Code, IntelliJ IDEA

AI Tools & Practices: Claude API, OpenAI API, LLM Integration, JWT Authentication, Two-Factor Authentication (TOTP), Payment Gateway Integration (Stripe)

PROJECTS

AICX - AI-Driven Chat Support, Calling & Subscription Platform

April 2026 - Present

Personal Project | Java, Spring Boot, Spring Security, React.js, MongoDB, WebSocket (STOMP), JWT, Stripe, Tailwind CSS v4, REST APIs, Claude API

- Built an AI-driven support platform combining real-time chat and automated calling, designed to handle a large number of concurrent users.
- Integrated LLM-based conversational capabilities using the Claude API to power intelligent chat responses and automated call handling.
- Built a multi-tier Subscription Management System with Stripe payment gateway integration for automated billing, role-based access control, and JWT-secured REST API endpoints using Spring Security.
- Implemented Two-Factor Authentication (TOTP) with QR code-based setup and email notifications, strengthening account security across the platform.
- Optimized MongoDB query performance with proper indexing strategies, maintaining consistent API response times under 15ms under load.
- Enabled real-time, low-latency bidirectional messaging using WebSocket (STOMP) for live chat sessions and instant support notifications.
- Tested all API endpoints using Postman, building a full collection covering authentication, subscription management, and chat session flows.

Code Combat - Real-Time Multiplayer Coding Battle Platform

May 2025

Personal Project | Node.js, Express.js, Socket.IO, MongoDB, JavaScript, HTML

- Engineered a real-time multiplayer coding platform with live battle sessions, using Socket.IO for low-latency, bidirectional state synchronization across all connected clients.
- Designed and implemented secure RESTful APIs for battle session management, authentication flows, and leaderboard tracking, achieving a 40% increase in user engagement.
- Managed session state and user data in MongoDB with optimized schema design for high-frequency read/write operations during competitive rounds.
- Leveraged AI-assisted development tools to accelerate algorithm design for battle-matching logic and reduce debugging time.

EDUCATION

Bachelor of Computer Applications (BCA)

August 2022 - June 2025

Graphic Era Hill University, Bhimtal

- Relevant Coursework: Data Structures & Algorithms, OOP with Java, DBMS, Web Technologies, Software Engineering, Computer Networks.
- Delivered multiple full-stack applications during coursework covering real-time systems, AI integrations, and relational database design.

AREAS OF INTEREST

Backend Engineering • AI-Integrated Systems • Enterprise Application Architecture • Real-Time Web Technologies • Open Source Development
